Glucose and Hemoglobin A1C

Hemoglobin A1C/Total Hemoglobin	5.0		4.0-5.9	%	31/Dec/2025 10:26
Target for therapy for patients greater than 13 years of age is less than 7 percent. Hemoglobin Low: HbA1c as a measure of glycemic control assumes a normal half-life of RBC. Conditions associated with a decreased RBC lifespan may yield a deceptively low result for HbA1c.
